

Healing Architecture – for liveable buildings in the healthcare field

First-class patient care and efficient processes for users have always been key when planning healthcare facilities.

However, the influence of architecture, equipment, and building operation processes themselves on human well-being is often neglected. The phrase “healing architecture” describes how building facilities themselves actively impact patient health and psychology. When used correctly, assets like bright and comfortable rooms, secure access to outdoor areas, available daylight and mobility with access for all are essential for creating a healing environment.

Healing architecture and GEZE

At GEZE, we are convinced that a patient’s mental and physical well-being have a major influence on the recovery process.

We have already installed our GEZE solutions and services in many different healthcare projects. In doing so, we are increasingly noting a change in the relationship between patient and facility, in particular in terms of architectural design, building navigation, and maintaining an atmosphere of well-being.

For the creation of liveable buildings

From natural ventilation to noise reduction, supporting injured users, maintaining hygiene or discrete safety measures – GEZE understands the fundamental characteristics of an efficient facility. We have shown that our healthcare expertise, combined with our broad portfolio of products and solutions, can help create healing environments and thereby improve patient health. In this way, we are making our contribution to recovery and well-being for building users, while helping to ensure safe, clean and efficient operation of buildings themselves.

The path to healing architecture with GEZE

→ GEZE UNDERSTANDS YOUR CHALLENGES

Our experts will identify your unique challenges and develop solutions that match your requirements – communication will be handled simply, efficiently, and personally.

→ GEZE CREATES SOLUTIONS

We will create your individual solution package based on your requirements, integrating everyone involved in the building life cycle in order to achieve optimal results.

→ GEZE SUPPORTS YOU CONTINUOUSLY

After receiving a contract, GEZE will stand by your side throughout the building life cycle as a competent partner – from installation to support, to maintenance and beyond.

Our next step toward healing architecture

To achieve this goal, we want to help create healing architecture in your building by taking on the following challenges with you:

SUSTAINABILITY

HYGIENE

CONVENIENCE

SAFETY

QUALITY

To do so, we have collected a variety of application examples that visualise healthcare challenges and solve them in consideration of the following critical success factors at your organisation:

COSTS

We can help you avoid or reduce unnecessary costs

TIME

We help you save time and increase efficiency in your operational processes

QUALITY

We create a high-quality experience for patients and users at your facility
