

The GEZE SecuLogic door control unit TZ 320

SLEEK & ELEGANT

The new version in a stainless steel finish

BEWEGUNG MIT SYSTEM

Top quality for maximum security

It controls and monitors one or more electrically locked emergency exits: the GEZE SecuLogic door control unit TZ 320. With its new stainless steel finish, this element of the GEZE SecuLogic emergency exit system is even safer.

At a glance:

The TZ 320 in stainless steel finish is...

- ...high-quality, thanks to its covering made of ground and deburred stainless steel.
- ...safe, because it offers optimum protection from vandalism.
- ...sturdy, because the stainless steel components are 1.5 mm thick.
- ...reliable, because a sabotage signal is triggered when the front plate is removed.
- ...flexible, because installation is quick and safe using only four screws.
- ...standardised, thanks to the identical implementation for surface-mounted and flush-mounted versions.
- ...versatile, for example lighting can easily be retrofitted.
- ...approved as per test certificates of the GEZE TZ 320 and TZ 300 door control units.
- ...also available in the TZ 322 version without emergency button for special applications.
